

360° PANORAMAS

SEE MORE - KNOW MORE

With 360° interactive full-screen panoramas we give your website an interesting and entertaining dimension that gives the visitor a realistic sense of space, the feeling of actually being there, in your premises, exhibition etc.

In the virtual tours that we produce visitors can click on "hot spots" and wander from one panorama to the other or click on preprogrammed objects in the panorama that open windows with video/audio/animation/images/text and interactive rotating objects. Suddenly it's all "within grasp". One is not only in the panorama, you can also touch and explore within it.

We are not only known for the perfect in-scene-settings in high quality, but also as idea generators for new presentations. Our implementations in 360° virtual tours are widely versatile but, to the point.

We do not expect that our clients come to us with "ready-made" ideas. Together we do a "stock-taking" to analyze the current situation and needs, then we propose an approach on how we can translate this into a 360° presentation for selected target groups.
